DETAILED ACTION

Double Patenting

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1-7,9-11,13-39, and 41-47 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 2-24 of copending Application No. 09/971116 in view of Fischer et al. (5,703,360).

09/971116 teaches a mass spectrometer adapted for underwater use comprising a watertight case having an inlet, a fluid control system adapted to acquire a fluid sample from an aqueous environment for delivery into the watertight case, the fluid control system positioned within the watertight case and in fluid communication with the sample inlet, a means for transforming an analyte molecule in the fluid sample from a liquid phase into a gas phase positioned within the watertight case, means for directing a fluid to the transforming means from the analyzing means, a mass analyzer housing positioned within the watertight case, the mass analyzer housing in fluid communication with the transforming means, a mass analyzer positioned within the mass analyzer housing, and a vacuum pump system adapted to establish a vacuum within the mass analyzer housing, the vacuum pump system positioned within the

watertight case and in fluid communication with the mass analyzer housing. 09/971116 teaches an ion trap mass spectrometer, but Fisher teaches that suitable mass spectrometers for analyzing include ion trap mass spectrometers and quadrupole mass filters (col. 4, lines 56-63). Therefore, it would have been obvious to one of ordinary skill in the art to use a quadrupole mass filter because it is a recognized art equivalent for analyzing molecules.

This is a provisional obviousness-type double patenting rejection.
